

Care

We traditionally attach great importance to form, material and quality. Our products are still made by hand today using traditional manufacturing methods and enchant with their beautifully shaped quality and sensual surfaces.

Acrylic glass is dishwasher safe up to 50 degrees Celsius. However, we recommend cleaning them by hand with lukewarm water and a mild detergent in order to enjoy our products for a long time.

Hand Wash

Max. 50°C

Sustainability

Heim Söhne has stood for unique quality for generations. We use only the highest quality acrylic glass – a noble and harmless material with minimal environmental impact.

Environmentally friendly production and processing result in durable, everyday utensils that help to reduce waste. Acrylic glass is fully recyclable and can easily be returned to the recovery cycle.

Tradition, Care & Sustainability

Quality, Form & Tradition

Handmade in Germany, our products have been delighting customers around the world since 1862. Now in its 6th generation of family management, Heim Söhne continues to stand for high quality craftsmanship and durable products.

160 Years of Craftsmanship

Our story begins in 1832 when Georg Friedrich Heim began his trade as a comb maker in Ober Ramstadt. In 1862, his son of the same name founded the first comb-making factory in Germany. By 1900, with the support of his sons, the business developed into the largest tortoiseshell processing factory in Europe. In the 1930s, production was gradually switched to acrylic glass, a new material that could be processed in the same way as tortoiseshell.

To this day, we live our love of form and careful processing in line with the values and visions of our founders.
